### Product Information

Opening and closing a 4WD tailgate is awkward and sometimes even dangerous - especially when your hands are full. The Aeroklas Tailgate Assist dampens tailgate weight through its uniquely designed dual gas strut system, which reduces the perceived weight of your 4x4's tailgate by up to 70% when you open and close it.

Aeroklas Tailgate Assist comprises of two major components: a gas strut mechanism on the left side that's designed to absorb the weight of the tailgate when it's closing, as well as a gas strut mechanism on the right side that dampens the perceived weight of the tailgate when it's opening. Both of these components significantly reduce the 'felt' weight of opening and closing your vehicle's tailgate, making it easy to open and close with one hand. The Aeroklas Tailgate Assist is vehicle specific, meaning no drilling or complicated fitting is required.

### Features

Lighter Opening and Closing

Dampens the weight of the tailgate, making lowering and raising virtually effortless.

Prevents the tailgate from slamming, to improve the safety of the tailgate providing peace of mind around children.

Controlled opening and closing.
